- Building things with your hands

# Hardware Hacking?

- Combining electronics and physical components with code
- Making real things and controlling them with software
- Building things with your hands
- Joining the Maker Movement

# Why JavaScript?

# Why JavaScript?

- Hardware demands asynchronous software

# Why JavaScript?

- Hardware demands asynchronous software
- Huge and diverse community

# Why JavaScript?

- Hardware demands asynchronous software
- Huge and diverse community
- Lowering the barriers to entry

# Why yes, JavaScript!

- Hardware demands asynchronous software
- Huge and diverse community
- Lowering the barriers to entry
- JavaScript is the language of the web

# Internet of Things

# Spark Core

# Spark.io

- Open source microcontroller
- Arduino compatible
- Wifi enabled
- Cloud certified®

# The Internet Connected Hat

# The Internet Connected Hat

Patent Pending

# Spark Core

# Spark Core

```
npm install sparky
```

```
var Sparky = require('sparky')

var core = new Sparky({
  deviceId: 'your device id',
  token: 'your access token',
})

core.digitalWrite('D7', 'HIGH');

core.digitalRead('D0', function(val){
  console.log(val)
});
```

# Arduino Uno

# Johnny Five

Johnny-Five is jQuery for robots

Johnny-Five is jQuery for the  
physical world

# Johnny-Five

- Supports over 99 hardware devices
- Started by Rick Waldren now has over 61 Contributors
- Most active JavaScript Robot Community

"A blinking light is the hello world of  
robotics."

-Sara Chipps

# Blink for Arduino

```
int led = 13;

// the setup routine runs once when you press reset:
void setup() {
  // initialize the digital pin as an output.
  pinMode(led, OUTPUT);
}

// the loop routine runs over and over again forever:
void loop() {
  digitalWrite(led, HIGH);  // turn the LED on (HIGH is the voltage level)
  delay(1000);              // wait for a second
  digitalWrite(led, LOW);   // turn the LED off by making the voltage LOW
  delay(1000);              // wait for a second
}
```

# Blink for Johnny Five

```
var five = require("johnny-five");
var board = new five.Board();

// Connect to the arduino
board.on("ready", function() {
  // Create a new Led object on pin 13
  var led = new five.Led(13);
  led.blink(); // blink!
});
```

# Das Blinkenlights

# ED 209

```
var ED = require('johnny-five/eg/ed.js');

// Create a new Enforcer Droid
var ed209 = new ED({
  // assign servos
  right: { hip: 9, foot: 11 },
  left: { hip: 10, foot: 12 }
});

// Stand upright!
ed209.attn();

// Walk forward!
ed209.fwd();

// Dance!
ed209.dance();

// another Rick Waldron creation
```

# ED 209

# Parrot AR Drone 2.0

# AR Drone

npm install ar-drone

```
var arDrone = require('ar-drone');
var client = arDrone.createClient();

client.takeoff();

client
  .after(5000, function() {
    this.clockwise(0.5);
  })
  .after(3000, function() {
    this.animate('flipLeft', 15);
  })
  .after(1000, function() {
    this.stop();
    this.land();
  });
```

# High-tech Observation & Orientation Device Interaction Enabler

H.O.O.D.I.E

Patent Pending

# H.O.O.D.I.E

```
// we're already connected to the drone and arduino
var button = new five.Button(7);
var leftYFlexSensor = new five.Sensor("A0");
var rightYFlexSensor = new five.Sensor("A1");
var leftZFlexSensor = new five.Sensor("A2");
var rightZFlexSensor = new five.Sensor("A3");

// push the button to turn on flying
button.on("up", function() {
  toggleFlying();
});
```

# H.O.O.D.I.E

```
// Map the flex sensors to both the drone and the VR simulation
leftYFlexSensor.on("read", function(err, value){
  var a= five.Fn.map(value, 100, 500, -90, 90);
  leftY = five.Fn.constrain(a, -80, 80);
  io.sockets.emit('leftY', { angle: leftY, value: value });
  move();
});

rightZFlexSensor.on("read", function(err, value){
  var a = five.Fn.map(value, 500, 200, -60, 60);
  rightZ = five.Fn.constrain(a, -60, 60);
  io.sockets.emit('rightZ', { angle: rightZ, value: value });
  move();
});
```

# Wrapping up

- As web developers, you are in the perfect position for the future of internet connect devices.

# Wrapping up

- As web developers, you are in the perfect position for the future of internet connect devices.
- This new breed of hardware and software brings jQuery-like levels of accessibility to Hardware Hacking.

# Wrapping up

- As web developers, you are in the perfect position for the future of internet connect devices.
- This new breed of hardware and software brings jQuery-like levels of accessibility to Hardware Hacking.
- Making things with you hands is incredibly rewarding

# NodeBots

- Any robot controlled by Node.js (or JS in general)
- Coined by Chris Willams in "Rise of JS Robotics"
- Cool Logo

# NodeBots Events

- Chapters all over the world (4 countries, 6 cities)
- Reach out to Oli Evans (@olizilla) about NodeBots London
- Start a new chapter near you with just a github pull request?
- Nodebots are better with friends

# NodeCopter

- AR Drones controlled with nodejs
- Hackdays with flying robots
- Community event (affordable & inclusive)
- Learning, sharing, fun and being nice to each other

Get out the and start hacking!

# Thanks
